

# glycofruit<sub>line</sub>

With increasing age and sun exposure, dead cells tend to accumulate on the skin surface. Cell renewal slows down. The skin surface becomes irregular and wrinkles accentuate.

The new GLYCOFRUIT line helps to remove dead cells of the cutaneous surface and boosts skin renewal by means of two types of mechanisms:

**a)** by reducing the cohesion among stratum corneum dead cells, enabling their sloughing off. Glycofruit products contain natural hydroxyacids with exfoliating and moisturizing effects:

- **Alpha-hydroxyacids (AHA):** glycolic, lactic, citric, malic and tartaric acids.

- **Beta-hydroxyacid (BHA):** salicylic acid

- **Poly-hydroxiacid (PHA):** lactobionic acid

**b)** encouraging the activity of the skin enzymes that are involved in the natural desquamation process, with **Exfolactive®**.

BELNATUR

## GLYCOFRUIT PRODUCTS

### Renova

Hydro-nourishing renewing cream, that is suitable for dry skin and for combination skin that tends to be dry. It contains a complex of 5 botanical extracts (Bilberry, Orange, Lemon, Sugar Cane and Sugar Maple) rich in natural AHA (Glycolic, Lactic, Citric, Malic and Tartaric), Lactobionic Acid (PHA), Exfolactive®, Structurine®, Vitamin E and sun protection (15).

Presentation: 5.3 oz. - 150 ml tube and 1.8 oz. - 50 ml jar

### Seractif

All skin type serum. Moisturizes dry skin and reduces the shiny appearance of oily skin. It contains a complex of 5 botanical extracts (Bilberry, Orange, Lemon, Sugar Cane and Sugar Maple) rich in natural AHA (Glycolic, Lactic, Citric, Malic and Tartaric), Lactobionic Acid (PHA), Salicylic Acid (BHA), Mucopolysaccharides and Carbohydrates.

Presentation: 4.2 U.S. fl.oz. - 125 ml flask and 1 U.S. fl.oz. - 30 ml dispensing flask.

### Bodysilk

Renewing and moisturizing body cream. It contains a complex of 5 botanical extracts (Bilberry, Orange, Lemon, Sugar Cane and Sugar Maple) rich in natural AHA (Glycolic, Lactic, Citric, Malic and Tartaric), Shea Butter, Urea, N.M.F. and Allantoin.

Presentation: 7 oz. - 200 ml tube

# glycofruit<sub>line</sub>

## CELLULAR RENEWAL

- With hydroxyacids: AHA, BHA y PHA
- With enzyme boosters: Exfolactive®

# glycofruit

## Main active ingredients of Glycofruit line

### HYDROXYACIDS

The five alpha-hydroxyacids (AHA) encountered in Glycofruit products come from a natural complex of five botanical extracts:

BILBERRY, ORANGE, LEMON, SUGAR MAPLE AND SUGAR CANE

This complex, besides AHA, includes other natural substances such as: carbohydrates, proteins, vitamins and minerals. The combination of these acids in a natural base achieves the maximum renewing efficacy, without the irritating effect of the acids.

Hydroxyacids help to remove dead cells, moisturize and boost cellular renewal. Moreover, they have additional properties that increase their benefits:

**GLYCOLIC ACID - AHA-**  
Obtained from Sugar Cane and Sugar Maple. It is the smallest one and has the highest penetrating and exfoliating abilities.

**LACTIC ACID - AHA-**  
In Glycofruit, it comes from Bilberries. It was first encountered in milk and hence its name. It is a natural constituent of the skin's Natural Moisturizing Factor and has high water retention ability.

**CITRIC ACID - AHA-**  
It is isolated from citrus fruits such as Orange and Lemon. It has lightening properties.

**MALIC ACID - AHA-**  
Although it is originally extracted from apples, in Glycofruit products it comes from Bilberries and Sugar Maple. Malic acid increases cellular energy (it boosts ATP synthesis) and provides freshness and vitality to the complexion.

**TARTARIC ACID - AHA-**  
It comes from Bilberries. Its lightening and antioxidant properties help to prevent premature ageing.

**SALICYLIC ACID - BHA-**  
It is obtained from willow's bark. Its antiseptic effect makes it suitable for oily skin care.

**LACTOBIONIC ACID -PHA-**  
It is a "Poly-hydroxyacid" isolated from milk lactose. It represents the last AHA generation. It has all the qualities of AHA and BHA, but it is not irritating and has high moisturizing and antioxidant effects.

### Other active ingredients

#### EXFOLACTIVE®

As increasing age, the activity of skin enzymes involved in the natural exfoliation process decreases. Exfolactive®, an extract of the Nopal cactus flower, boosts the enzymes that are in charge of breaking the links among dead cells. It helps the skin to recover its own exfoliation ability.

#### STRUCTURINE®

To compensate for the increase in the exfoliation rate and to help the skin in its renewal process, GLYCOFRUIT includes STRUCTURINE®, a white lupine extract that favours the synthesis of epidermal lipids and proteins and helps to restore the skin's barrier function. It improves new cells cohesion and prevents from dehydration.
